Chapter 1 Matter and Measurement

Solutions to Practice Problems

1.1 Representation (a) is a pure substance because each particle contains one red and two gray spheres. Representation (b) is a mixture because some of the particles are only red, and some are red and black.

1.2 Use Table 1.2 to determine the prefix for each unit.

a. a million liters = megaliter

c. a hundredth of a gram = centigram

b. a thousandth of a second = millisecond

d. a tenth of a liter = deciliter

1.3 All nonzero digits are significant. A zero is significant only if it occurs between two nonzero digits, or at the end of a number with a decimal point. The significant figures are in **bold**.

a. **23.45**

4 significant
figures

c. **230**

2 significant
figures

e. **0.202**

3 significant
figures

g. **1,245,006**

7 significant
figures

i. **10,040**

4 significant
figures

b. **23.057**

5 significant
figures

d. **231.0**

4 significant
figures

f. **0.003 60**

3 significant
figures

h. **1,200,000**

2 significant
figures

j. **10,040.**

5 significant
figures

1.4 When the number to be rounded off is 4 or fewer, it and all other digits to the right are dropped. When the number is 5 or greater, 1 is added to the digit to its left.

a. 1.2735 Since this number is 7 (5 or greater),
 round the 2 to its left up by one.
 ↓
 1.3

c. 3,836.9 Since this number is 3 (4 or fewer),
 drop it and all numbers to its right.
 ↓
 3,800

b. 0.002 536 22 Since this number is 3 (4 or fewer),
 drop it and all numbers to its right.
 ↓
 0.0025

1.5 The answers must have the same number of significant figures as the original number with the fewest number of significant figures.

a. $10.70 \times 3.5 = 37.45$

Because 3.5 has only two significant figures,
round the answer to give it two significant
figures.

37

c. $1,300 \div 41.2 = 31.553\ 398$

Because 1,300 has only two significant
figures, round the answer to give it two
significant figures.

32

b. $0.206 \div 25,993 = 0.000\ 007\ 93$

Because 0.206 has three significant figures, the answer has the appropriate number of significant figures.

d. $120.5 \times 26 = 3,133$

Because 26 has only two significant figures, round the answer to give it two significant figures.

3,100

- 1.6** The answers must have the same number of decimal places as the original number with the fewest decimal places.

a. $27.8\text{ cm} + 0.246\text{ cm} = 28.046\text{ cm}$

Because 27.8 has one digit after the decimal point, round the answer to one digit after the decimal point.

28.0 cm

b. $102.66\text{ mL} + 0.857\text{ mL} + 24.0\text{ mL} = 127.517\text{ mL}$

Because 24.0 has one digit after the decimal point, round the answer to one digit after the decimal point.

127.5 mL

c. $54.6\text{ mg} - 25\text{ mg} = 29.6\text{ mg}$

Because 25 has zero digits after the decimal point, round the answer to the nearest whole number.

30. mg

d. $2.35\text{ s} - 0.266\text{ s} = 2.084\text{ s}$

Because 2.35 has two digits after the decimal point, round the answer to two digits after the decimal point.

2.08 s

- 1.7** To write a number in scientific notation:

[1] Move the decimal point to give a number between 1 and 10.

[2] Multiply the result by 10^x , where x is the number of places the decimal point was moved.

a. $93,200 = 9.32 \times 10^4$

The decimal point was moved four places to the left.

c. $6,780,000 = 6.78 \times 10^6$

The decimal point was moved six places to the left.

e. $4,520,000,000,000 =$

4.52×10^{12}

The decimal point was moved 12 places to the left.

b. $0.000\ 725 = 7.25 \times 10^{-4}$

The decimal point was moved four places to the right.

d. $0.000\ 030 = 3.0 \times 10^{-5}$

The decimal point was moved five places to the right.

f. $0.000\ 000\ 000\ 028 =$

2.8×10^{-11}

The decimal point was moved 11 places to the right.

- 1.8 The exponent in 10^x tells how many places to move the decimal point in the coefficient to generate a standard number. The decimal point goes to the right when x is positive and to the left when x is negative.

a. $6.5 \times 10^3 = 6,500$

The decimal point was moved three places to the right.

b. $3.26 \times 10^{-5} = 0.000\,032\,6$

The decimal point was moved five places to the left.

c. $3.780 \times 10^{-2} = 0.037\,80$

The decimal point was moved two places to the left.

d. $1.04 \times 10^8 = 104,000,000$

The decimal point was moved eight places to the right.

e. $2.221 \times 10^6 = 2,221,000$

The decimal point was moved six places to the right.

f. $4.5 \times 10^{-10} =$

0.000 000 000 45

The decimal point was moved 10 places to the left.

- 1.9 Use the equalities in Tables 1.3 and 1.4 to write a fraction that shows the relationship between the two units.

a. $\frac{0.621\text{ mi}}{1\text{ km}} \quad \frac{1\text{ km}}{0.621\text{ mi}}$

c. $\frac{454\text{ g}}{1\text{ lb}} \quad \frac{1\text{ lb}}{454\text{ g}}$

b. $\frac{1000\text{ mm}}{1\text{ m}} \quad \frac{1\text{ m}}{1000\text{ mm}}$

d. $\frac{1000\text{ }\mu\text{g}}{1\text{ mg}} \quad \frac{1\text{ mg}}{1000\text{ }\mu\text{g}}$

- 1.10 Use conversion factors to solve the problems.

a. $25\cancel{\text{ L}} \times \frac{10\cancel{\text{ dL}}}{1\cancel{\text{ L}}} = 250\text{ dL}$

b. $40.0\cancel{\text{ oz}} \times \frac{28.3\text{ g}}{1\cancel{\text{ oz}}} = 1,132\text{ g} = 1,130\text{ g}$ rounded to 3 significant figures

c. $32\cancel{\text{ in.}} \times \frac{2.54\text{ cm}}{1\cancel{\text{ in.}}} = 81.28\text{ cm} = 81\text{ cm}$ rounded to 2 significant figures

d. $10\cancel{\text{ cm}} \times \frac{10\text{ mm}}{1\cancel{\text{ cm}}} = 100\text{ mm}$

- 1.11 Use conversion factors to solve the problems.

a. $6,250\cancel{\text{ ft}} \times \frac{1\cancel{\text{ mi}}}{5,280\cancel{\text{ ft}}} \times \frac{1\text{ km}}{0.621\cancel{\text{ mi}}} = 1.91\text{ km}$
 Feet cancel. Miles cancel. Kilometers do not cancel.

b. $3\cancel{\text{ cups}} \times \frac{1\cancel{\text{ qt}}}{4\cancel{\text{ cups}}} \times \frac{1\text{ L}}{1.06\cancel{\text{ qt}}} = 0.7\text{ L}$
 Cups cancel. Quarts cancel. Liters do not cancel.

$$\text{c. } 4.5 \cancel{\text{ft}} \times \frac{12 \cancel{\text{in.}}}{1 \cancel{\text{ft}}} \times \frac{2.54 \text{ cm}}{1 \cancel{\text{in.}}} = 140 \text{ cm}$$

1.12

$$0.100 \cancel{\text{mg}} \times \frac{1000 \cancel{\text{mg}}}{1 \cancel{\text{mg}}} \times \frac{1 \text{ tablet}}{25 \cancel{\text{mg}}} = 4 \text{ tablets}$$

1.13 Use the conversion factors: 1 teaspoon = 5 mL and 80. mg acetaminophen/2.5 mL of Tylenol.

$$\text{a. } 2.5 \cancel{\text{tsp}} \times \frac{5 \text{ mL}}{1 \cancel{\text{tsp}}} = 12.5 \text{ mL rounded to } 13 \text{ mL (2 significant figures)}$$

$$\text{b. } 13 \cancel{\text{mL}} \times \frac{80. \text{ mg}}{2.5 \cancel{\text{mL}}} = 416 \text{ mg rounded to } 420 \text{ mg (2 significant figures)}$$

1.14 Convert from T_C to T_F and T_K using the formulas listed in Section 1.9.

$$\begin{aligned} T_F &= 1.8(T_C) + 32 & T_K &= T_C + 273 \\ &= 1.8(28.5) + 32 = 83.3^\circ\text{F} & &= 28.5 + 273 = 302 \text{ K} \end{aligned}$$

- 1.15 a. Because the densities of **A** and **B** are the same and there is a larger volume of **B**, the mass of **B** is greater than the mass of **A**.
- b. The density of **A** is twice the density of **B**, but there is three times as much volume of **B** as **A**, so the mass of **B** is greater than the mass of **A**.
- c. The density of **B** is greater than the density of **A** and there is a larger volume of **B**, so the mass of **B** is greater than the mass of **A**.

1.16 To convert volume (mL) to mass (g), multiply the volume by the density (g/mL).

$$10.0 \cancel{\text{mL}} \times \frac{0.713 \text{ g}}{1 \cancel{\text{mL}}} = 7.13 \text{ g}$$

Milliliters cancel.

$$152 \cancel{\text{oz}} \times \frac{28.3 \cancel{\text{g}}}{1 \cancel{\text{oz}}} \times \frac{1 \text{ kg}}{1000 \cancel{\text{g}}} = 4.3 \text{ kg}$$

$$\begin{aligned} \text{b. } T_C &= \frac{T_F - 32}{1.8} \\ &= \frac{150. - 32}{1.8} = 66^\circ\text{C} \end{aligned}$$

1.17

$$10.5 \cancel{\text{kg}} \times \frac{1000 \cancel{\text{g}}}{1 \cancel{\text{kg}}} \times \frac{1 \cancel{\text{mL}}}{1.38 \cancel{\text{g}}} \times \frac{1 \text{ L}}{1000 \cancel{\text{mL}}} = 7.61 \text{ L}$$

1.18

$$\text{a. specific gravity} = \frac{\text{density of a substance (g/mL)}}{\text{density of water (g/mL)}} = \frac{0.80 \text{ g/mL}}{1 \text{ g/mL}} = 0.80$$
